About our Potatoes

Where do our potatoes come from and what makes them so good? :

We are G. Mostafa Trade is the registered exporter company in Bangladesh which makes our seed that we grow some of the healthiest in the Bangladesh. All of our seed that we handle is part of the Safe Bangladesh scheme which protects the seed potato industry from many diseases that can be imported from abroad. We have a large network of growers all over Bangladesh that growing with seed as well to the same high standard. 100% of the seed that we handle is Bangladeshi grown.

So what can we do for your business? :

We can supply you with our brand of 10 Kg, 20kg, 25 Kg, 40 Kg sacks or 10x2kg pre packs of over 10 of the nation's favorite varieties. We use a tractable pallet service and most orders are delivered within 24hrs from dispatch. Our paper bags provide excellent insulation against frost when we are delivering during the winter months compared to net and hessian bags.

The freshness of our product also gives our customers an advantage as we pack our potatoes the week of your delivery so that you get the maximum shelf life from them. The seed potatoes are stored in temperature controlled stores and overall we have 25000sq ft. of floor capacity to store and handle potatoes on. All of our products are barcoded so make for easy handling and checking. We also have the largest UK network of wholesalers who can locally provide you with our seed. Please contact us so we can provide you with your local wholesalers details.

We hope that you will find our services as most comprehensive and entrust us to deliver the goods on time to you or your customers. Our main aims are quality of service and product to further enhance our reputation in the horticultural industry.

Planting & Growing

A guide to all you need to know

*** Prepare the bed :**

With the use of a garden fork simply turn the soil over and work in some well-rotted manure to provide essential nutrients for your potatoes. If you are unable to use manure then specialized potato fertilizer can be used but the fertilizer should be placed below the potato and a layer of soil or compost put in between so that the potato roots grow down into the soil to establish properly.

The potato bed should be a trench about 4-6 inches deep and you place the potato in the trench and cover with soil so that a small peak is formed.

*** Storing & Chitting :**

After purchase, carefully empty seed potato contents into shallow boxes or trays; egg boxes or apple trays are ideal. Keep away from frost and store in a cool area. Six weeks before you want to plant your early potatoes you should move your potatoes into a light area of about 10 degrees Celsius to produce a strong, thick sprout, making sure that the potatoes are rose eye upwards.

The potatoes will turn green when exposed to the light but do not worry as this is normal. If you wish to grow large potatoes you can carefully cut out some of the eyes on the potatoes so that only a few chits are formed and the potato will produce larger but fewer tubers. If you wish to grow many small tubers to eat like baby potatoes then leave all the eyes intact and plant the potatoes at half the distances.

Protect your Potatoes

* Protection Spray :

A brand new product developed for the prevention of foliar blight in potatoes. This a 100% natural product with no chemicals and is safe to use in your garden. Simply add 40ml of the Amstar Top 325 SC concentrate to 20 liters of water and either spray (Azoxystrobin + Difenconazole) onto the foliage or apply with a watering can. Spraying is considered to be the best method of application as you need to spray the foliage on both sides of the leaf. The solution can also be made up in smaller batches of 10ml to 5 liters of water. You should use this product every 7 days during June - September to help combat the threat of blight. If you have a period of weather that's more likely to cause blight (Smith Period) then use the product at the time that period is forecast. Use any mixed solution within 48hrs of being mixed with water. This product will only help to reduce the chances of your crops getting blight and like any other product we can't guarantee that it will prevent blight in all cases.

03. MANILA

04. CARTINAL

Type of Potatoes

* Details :

Most sell-able potato sizes are 50 to 150 gms. Those have very good demand in home and abroad market. In respect of quality, taste and price; Bangladesh origin potatoes are good competitive compare to other Asian country's potatoes. Therefore importers of worlds many countries are attracted to import / buy potatoes and other agro products from exporters of Bangladesh. The main importing countries of Bangladesh origin potato are BELGIUM, GERMANY, SPAIN, AUSTRALIA, MALAYSIA, UAE, SAUDI ARABIA, OMAN, VIETNAM, PHILIPPINE AND RUSSIA. G. Mostafa Trade is Exporting and re-exporting Bangladesh origin Potato to other overseas countries. Although harvesting season of potato starts from November till March, but round the year we export potatoes with variable price from cold storage. Under optimum conditions, potato can be stored for up to ten to twelve months. We have well setup for exporting fresh potatoes in Bangladesh under mesh packing of 10 kg. 15 kg. & 20 kg through reefer container with best competitive price. Bangladesh origin potato now secured good export market share in the worlds potato market due to quality, taste and best competitive price. To meet the demand of worlds importer and exporter, G. Mostafa Trade is in a position to grow specific variety of potato suitable for tropical country. Bangladesh climate and soil is very suitable to grow tropical country potato with best competitive price as labor cost of farmer here quite low compare to any other potato and Agro product growing countries. So, if any buyers / importers are willing to procure such specific tropical variety potato please feel free to contact us for further negotiation. Winter season (November to March) is suitable for growing & harvesting potatoes in Bangladesh. When temperatures remains within the range of 08 C° to 18 C° in Bangladesh there is now strong value added potato product producing industry. Therefore produced fresh potato of G. Mostafa Trade mainly export and consume locally. So, any entrepreneur if willing to produce any value added potato products in Bangladesh surely he will be highly successful and benefited by selling and exporting those products in Home and Abroad, because population of Bangladesh is 180 million and man living cost is quite low.
